

## SUSTAINABILITY PRACTICES IN SUPPLY CHAIN

---

IPC Projects looks at the complete supply chain lifecycle when procuring for a project.

When selecting materials, where possible, we will select companies that have environmental policies for manufacturing, packaging, transportation, warehousing, distribution, consumption, return and disposal.

An environmentally sustainable supply chain management and practices can help us in not only reducing our carbon footprint, but also in optimising our end-to-end operations to achieve greater cost savings and profitability.

We also choose where possible to work with companies that have a Corporate Social Responsibility policy in place, and those that publicly comply with the Modern Slavery Act 2018 (NSW).
